PREPARED BY :

Presented by Tapan

I'm Tapan, and this project **HealthVary Recipes** is a healthy recipe portal where users can explore sweet and savoury recipes, rate them, and give feedback.

It uses structured tables like **Diet, Recipe, Ingredient, User,** and **Feedback**. With the help of **SQL queries, joins, subqueries, and views**, we retrieve meaningful insights like top-rated recipes, spiciest diets, and ingredient details.

This project shows how database concepts can support a health-focused application.

THANK YOU
